** Formaldehyde content - Class E1:

According to the “Regulation on the Prohibition of Chemicals (ChemVerbotsV)” from October 1993 along with the “Regulation on the classification and external supervision of wood-based panels regarding formaldehyde emission (DIBt – Guideline 100) dated June 1994, un-faced particleboard must not exceed a perforator value (photometric) of 8 mg HCHO/100g oven dry board at a moisture content of 6.5 %. The rolling average of EN 120 values over a period of ½ year is max. 6.5 mg HCHO/100g panel mass.
